Standards:

- SINEX with required info/blocks,
- Reference frame **IGS20**,
- IERS Conventions 2010,
- IGS/CODE products,
- ocean loading corrections (**FES2014b**),
- 3° elevation cut-off angle; elevation dependent weighting,
- GMF and/or **VMF1**; Chen-Herring gradient parameter,
- ambiguities fixed (length-dependent algorithm),
- use GLONASS obs (when available)
- use ATX files (**epn_20.atx**)

Overview

Santorini is located in the central part of the Hellenic Volcanic Arc (South Aegean Sea) and is well known for the Late Bronze Age "Minoan" eruption that might have been responsible for the decline of the great Minoan civilization on the island of Crete. Santorini has evolved over at least 650,000 years.
